DETAILED ACTION

1. Claims 1-14, 19-22, and 27-28 are pending.

Allowable Subject Matter

2. Claims 1-14, 19-22, and 27-28 are allowed.
3. The following is an examiner's statement of reasons for allowance: The present invention teaches a method for authenticating an executable external module at a single computer system. An executable external module is authenticated by using an authentication token that produces the value K using two different schemes. The executable external module is first disrupted using the value K accessed by the first scheme. The disrupted executable external module is then restored by using the value K accessed using second scheme. Each independent claim identifies the distinct feature of rendering an executable external module unusable and then recovering the executable module using the value K wherein K is accessed from a single authentication token using two different schemes and wherein the disrupting and recovering occurs at a single computer (see Applicant's response dated 10/20/2004 Page 12). The closest prior art, Moore US Patent No. 5,343,527 teaches a hybrid encryption method for protecting reusable components. The prior art fails to teach the disrupting and recovering of a module using a single value of K accessed through two

schemes at a single computer and thus fails to anticipate or render the above limitations obvious.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
